1 PROBLEM

Find two different 2×2 matrices \mathbf{A} such that $\mathbf{A}^2 = 0$ but $\mathbf{A} \neq 0$

2 SOLUTION

The matrix \mathbf{A} can be given by,

$$\mathbf{A} = \begin{pmatrix} \mathbf{m} & \mathbf{n} \end{pmatrix} \quad (2.0.1)$$

$$\mathbf{m} = \begin{pmatrix} m_1 \\ m_2 \end{pmatrix}, \mathbf{n} = \begin{pmatrix} n_1 \\ n_2 \end{pmatrix} \quad (2.0.2)$$

Now,

$$\mathbf{A}^2 = \mathbf{A}\mathbf{A} = 0 \quad (2.0.3)$$

$$\Rightarrow \mathbf{A}^2 = \begin{pmatrix} m_1 & n_1 \\ m_2 & n_2 \end{pmatrix} \begin{pmatrix} \mathbf{m} & \mathbf{n} \end{pmatrix} = \begin{pmatrix} \mathbf{c}_1 & \mathbf{c}_2 \end{pmatrix} = 0 \quad (2.0.4)$$

From (2.0.4), we say that the columns of matrix \mathbf{A} must lie in the nullspace of \mathbf{A} .

$$\mathbf{c}_1 = m_1 \begin{pmatrix} m_1 \\ m_2 \end{pmatrix} + m_2 \begin{pmatrix} n_1 \\ n_2 \end{pmatrix} = 0 \quad (2.0.5)$$

$$\mathbf{c}_2 = n_1 \begin{pmatrix} m_1 \\ m_2 \end{pmatrix} + n_2 \begin{pmatrix} n_1 \\ n_2 \end{pmatrix} = 0 \quad (2.0.6)$$

Let's assume,

$$\mathbf{m} = \begin{pmatrix} a \\ a \end{pmatrix} \quad (2.0.7)$$

then,

$$\mathbf{c}_1 = \begin{pmatrix} a^2 + an_1 \\ a^2 + an_2 \end{pmatrix} = 0 \quad (2.0.8)$$

thus $a = 0$ or $n_1 = n_2 = -a$. When $a = 0$,

$$\Rightarrow \mathbf{c}_2 = \begin{pmatrix} n_1 n_2 \\ n_2^2 \end{pmatrix} = 0 \quad (2.0.9)$$

$$\Rightarrow n_2 = 0 \quad (2.0.10)$$

Thus we get,

$$\mathbf{A} = \begin{pmatrix} a & -a \\ a & -a \end{pmatrix}; a \neq 0 \quad (2.0.11)$$

and

$$\mathbf{A} = \begin{pmatrix} 0 & n_1 \\ 0 & 0 \end{pmatrix}; n_1 \neq 0 \quad (2.0.12)$$

Now, let's assume,

$$\mathbf{n} = \begin{pmatrix} a \\ a \end{pmatrix} \quad (2.0.13)$$

then,

$$\mathbf{c}_2 = \begin{pmatrix} am_1 + a^2 \\ am_2 + a^2 \end{pmatrix} = 0 \quad (2.0.14)$$

thus $a = 0$ or $m_1 = m_2 = -a$. When $a = 0$,

$$\Rightarrow \mathbf{c}_1 = \begin{pmatrix} m_1^2 \\ m_1 m_2 \end{pmatrix} = 0 \quad (2.0.15)$$

$$\Rightarrow m_1 = 0 \quad (2.0.16)$$

Thus we get,

$$\mathbf{A} = \begin{pmatrix} -a & a \\ -a & a \end{pmatrix}; a \neq 0 \quad (2.0.17)$$

and

$$\mathbf{A} = \begin{pmatrix} 0 & 0 \\ m_2 & 0 \end{pmatrix}; m_2 \neq 0 \quad (2.0.18)$$

One such matrix also is,

$$\mathbf{A} = \begin{pmatrix} a & a \\ -a & -a \end{pmatrix}; a \neq 0 \quad (2.0.19)$$

Thus two different 2×2 matrices are,

$$\mathbf{A} = \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix} \quad (2.0.20)$$

$$\mathbf{A} = \begin{pmatrix} 2 & -2 \\ 2 & -2 \end{pmatrix} \quad (2.0.21)$$
