1 PROBLEM

Find the point on the plane closest to the point $\begin{pmatrix} 6 \\ 5 \\ 9 \end{pmatrix}$ and the plane is determined by the points

$$\mathbf{A} = \begin{pmatrix} 3 \\ -1 \\ 2 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} 5 \\ 2 \\ 4 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} -1 \\ -1 \\ 6 \end{pmatrix}$$

2 SOLUTION

The equation of plane is given by,

$$\mathbf{n}^T \mathbf{x} = c \quad (2.0.1)$$

$$\mathbf{n}^T \mathbf{A} = \mathbf{n}^T \mathbf{B} = \mathbf{n}^T \mathbf{C} = c \quad (2.0.2)$$

$$\Rightarrow (\mathbf{A} - \mathbf{B} \quad \mathbf{B} - \mathbf{C})^T \mathbf{n} = 0 \quad (2.0.3)$$

Using row reduction on above matrix,

$$\begin{pmatrix} -2 & -3 & -2 \\ 6 & 3 & -2 \end{pmatrix} \xrightarrow{R_1 \leftarrow \frac{R_1}{-2}} \begin{pmatrix} 1 & \frac{3}{2} & 1 \\ 6 & 3 & -2 \end{pmatrix} \quad (2.0.4)$$

$$\xrightarrow{R_2 \leftarrow R_2 - 6R_1} \begin{pmatrix} 1 & \frac{3}{2} & 1 \\ 0 & -6 & -8 \end{pmatrix} \xrightarrow{R_2 \leftarrow \frac{R_2}{-6}} \begin{pmatrix} 1 & \frac{3}{2} & 1 \\ 0 & 1 & \frac{4}{3} \end{pmatrix} \quad (2.0.5)$$

$$\xrightarrow{R_1 \leftarrow R_1 - \frac{R_2}{2}} \begin{pmatrix} 1 & 0 & -1 \\ 0 & 1 & \frac{4}{3} \end{pmatrix} \quad (2.0.6)$$

Thus,

$$\mathbf{n} = \begin{pmatrix} 1 \\ -\frac{4}{3} \\ 1 \end{pmatrix} = \begin{pmatrix} 3 \\ -4 \\ 3 \end{pmatrix} \quad (2.0.7)$$

$$c = \mathbf{n}^T \mathbf{A} = 19 \quad (2.0.8)$$

Thus the equation of the plane is,

$$(3 \quad -4 \quad 3)\mathbf{x} = 19 \quad (2.0.9)$$

Let \mathbf{m}_1 and \mathbf{m}_2 be the two orthogonal vectors to the given normal. Let, $\mathbf{m} = \begin{pmatrix} a \\ b \\ c \end{pmatrix}$, then

$$\mathbf{m}^T \mathbf{n} = 0 \quad (2.0.10)$$

$$\Rightarrow (a \quad b \quad c) \begin{pmatrix} 3 \\ -4 \\ 3 \end{pmatrix} = 0 \quad (2.0.11)$$

$$\Rightarrow 3a - 4b + 3c = 0 \quad (2.0.12)$$

Let $a = 1, b = 0$ we get,

$$\mathbf{m}_1 = \begin{pmatrix} 1 \\ 0 \\ -1 \end{pmatrix} \quad (2.0.13)$$

Let $a = 0, b = 1$ we get,

$$\mathbf{m}_2 = \begin{pmatrix} 0 \\ 1 \\ \frac{4}{3} \end{pmatrix} \quad (2.0.14)$$

Solving the equation,

$$\mathbf{M}\mathbf{x} = \mathbf{b} \quad (2.0.15)$$

Putting the values in (2.0.15),

$$\begin{pmatrix} 1 & 0 \\ 0 & 1 \\ -1 & \frac{4}{3} \end{pmatrix} \mathbf{x} = \begin{pmatrix} 6 \\ 5 \\ 9 \end{pmatrix} \quad (2.0.16)$$

To solve (2.0.16), we perform Singular Value Decomposition on \mathbf{M} ,

$$\mathbf{M} = \mathbf{U}\mathbf{S}\mathbf{V}^T \quad (2.0.17)$$

Where the columns of \mathbf{V} are the eigen vectors of $\mathbf{M}^T \mathbf{M}$, the columns of \mathbf{U} are the eigen vectors of $\mathbf{M}\mathbf{M}^T$ and \mathbf{S} is diagonal matrix of singular value of

eigenvalues of $\mathbf{M}^T\mathbf{M}$.

$$\mathbf{M}^T\mathbf{M} = \begin{pmatrix} 2 & \frac{-4}{3} \\ \frac{-4}{3} & \frac{25}{9} \end{pmatrix} \quad (2.0.18)$$

$$\mathbf{M}\mathbf{M}^T = \begin{pmatrix} 1 & 0 & -1 \\ 0 & 1 & \frac{4}{3} \\ -1 & \frac{4}{3} & \frac{25}{9} \end{pmatrix} \quad (2.0.19)$$

Putting (2.0.17) in (2.0.15) we get,

$$\mathbf{U}\mathbf{S}\mathbf{V}^T\mathbf{x} = \mathbf{b} \quad (2.0.20)$$

$$\Rightarrow \mathbf{x} = \mathbf{V}\mathbf{S}_+\mathbf{U}^T\mathbf{b} \quad (2.0.21)$$

Where \mathbf{S}_+ is Moore-Penrose Pseudo-Inverse of \mathbf{S} .
Now, calculating eigen values of $\mathbf{M}\mathbf{M}^T$,

$$|\mathbf{M}\mathbf{M}^T - \lambda\mathbf{I}| = 0 \quad (2.0.22)$$

$$\Rightarrow \begin{vmatrix} 1-\lambda & 0 & -1 \\ 0 & 1-\lambda & \frac{4}{3} \\ -1 & \frac{4}{3} & \frac{25}{9}-\lambda \end{vmatrix} = 0 \quad (2.0.23)$$

$$\Rightarrow \lambda^3 - \frac{43}{9}\lambda^2 + \frac{34}{9}\lambda = 0 \quad (2.0.24)$$

Thus the eigen values of $\mathbf{M}\mathbf{M}^T$ are,

$$\lambda_1 = \frac{34}{9} \quad (2.0.25)$$

$$\lambda_2 = 1 \quad (2.0.26)$$

$$\lambda_3 = 0 \quad (2.0.27)$$

The eigen vectors comes out to be,

$$\mathbf{u}_1 = \begin{pmatrix} \frac{-9}{25} \\ \frac{12}{25} \\ 1 \end{pmatrix}, \mathbf{u}_2 = \begin{pmatrix} \frac{4}{3} \\ 1 \\ 0 \end{pmatrix}, \mathbf{u}_3 = \begin{pmatrix} 1 \\ \frac{-4}{3} \\ 1 \end{pmatrix} \quad (2.0.28)$$

Normalising the eigen vectors,

$$\mathbf{u}_1 = \begin{pmatrix} \frac{-9}{5\sqrt{34}} \\ \frac{12}{5\sqrt{34}} \\ \frac{5}{\sqrt{34}} \end{pmatrix}, \mathbf{u}_2 = \begin{pmatrix} \frac{4}{5} \\ \frac{3}{5} \\ 0 \end{pmatrix}, \mathbf{u}_3 = \begin{pmatrix} \frac{3}{\sqrt{34}} \\ \frac{-4}{\sqrt{34}} \\ \frac{3}{\sqrt{34}} \end{pmatrix} \quad (2.0.29)$$

Hence we obtain \mathbf{U} matrix as,

$$\mathbf{U} = \begin{pmatrix} \frac{-9}{5\sqrt{34}} & \frac{4}{5} & \frac{3}{\sqrt{34}} \\ \frac{12}{5\sqrt{34}} & \frac{3}{5} & \frac{-4}{\sqrt{34}} \\ \frac{5}{\sqrt{34}} & 0 & \frac{3}{\sqrt{34}} \end{pmatrix} \quad (2.0.30)$$

Now,

$$\mathbf{S} = \begin{pmatrix} \frac{\sqrt{34}}{3} & 0 \\ 0 & 1 \\ 0 & 0 \end{pmatrix} \quad (2.0.31)$$

Calculating the eigen values of $\mathbf{M}^T\mathbf{M}$,

$$|\mathbf{M}^T\mathbf{M} - \lambda\mathbf{I}| = 0 \quad (2.0.32)$$

$$\Rightarrow \begin{vmatrix} 2-\lambda & \frac{-4}{3} \\ \frac{-4}{3} & \frac{25}{9}-\lambda \end{vmatrix} = 0 \quad (2.0.33)$$

$$\Rightarrow \lambda^2 - \frac{43}{9}\lambda + \frac{34}{9} = 0 \quad (2.0.34)$$

The eigen values are,

$$\lambda_1 = \frac{34}{9} \quad (2.0.35)$$

$$\lambda_2 = 1 \quad (2.0.36)$$

The eigen vectors are,

$$\mathbf{v}_1 = \begin{pmatrix} \frac{-3}{4} \\ 1 \end{pmatrix}, \mathbf{v}_2 = \begin{pmatrix} \frac{4}{3} \\ 1 \end{pmatrix} \quad (2.0.37)$$

Normalising the eigen vectors,

$$\mathbf{v}_1 = \begin{pmatrix} \frac{-3}{5} \\ \frac{4}{5} \end{pmatrix}, \mathbf{v}_2 = \begin{pmatrix} \frac{4}{5} \\ \frac{3}{5} \end{pmatrix} \quad (2.0.38)$$

Hence we obtain \mathbf{V} matrix as,

$$\mathbf{V} = \begin{pmatrix} \frac{-3}{5} & \frac{4}{5} \\ \frac{4}{5} & \frac{3}{5} \end{pmatrix} \quad (2.0.39)$$

Thus we get the Singular Value Decomposition of \mathbf{M} as,

$$\mathbf{M} = \begin{pmatrix} \frac{-9}{5\sqrt{34}} & \frac{4}{5} & \frac{3}{\sqrt{34}} \\ \frac{12}{5\sqrt{34}} & \frac{3}{5} & \frac{-4}{\sqrt{34}} \\ \frac{5}{\sqrt{34}} & 0 & \frac{3}{\sqrt{34}} \end{pmatrix} \begin{pmatrix} \frac{\sqrt{34}}{3} & 0 \\ 0 & 1 \\ 0 & 0 \end{pmatrix} \begin{pmatrix} \frac{-3}{5} & \frac{4}{5} \\ \frac{4}{5} & \frac{3}{5} \end{pmatrix}^T \quad (2.0.40)$$

The Moore-Penrose Pseudo inverse of \mathbf{S} is given by,

$$\mathbf{S}_+ = \begin{pmatrix} \frac{3}{\sqrt{34}} & 0 & 0 \\ 0 & 1 & 0 \end{pmatrix} \quad (2.0.41)$$

From (2.0.21) we get,

$$\mathbf{U}^T\mathbf{b} = \begin{pmatrix} \frac{231}{5\sqrt{34}} \\ \frac{39}{5} \\ \frac{25}{5} \end{pmatrix} \quad (2.0.42)$$

$$\mathbf{S}_+\mathbf{U}^T\mathbf{b} = \begin{pmatrix} \frac{693}{170} \\ \frac{39}{5} \\ \frac{25}{5} \end{pmatrix} \quad (2.0.43)$$

$$\mathbf{x} = \mathbf{V}\mathbf{S}_+\mathbf{U}^T\mathbf{b} = \begin{pmatrix} \frac{129}{17} \\ \frac{34}{135} \\ \frac{17}{17} \end{pmatrix} \quad (2.0.44)$$

Verifying the solution of (2.0.44) using,

$$\mathbf{M}^T\mathbf{M}\mathbf{x} = \mathbf{M}^T\mathbf{b} \quad (2.0.45)$$

Evaluating the R.H.S in (2.0.45) we get,

$$\mathbf{M}^T \mathbf{b} = \begin{pmatrix} -3 \\ 17 \end{pmatrix} \quad (2.0.46)$$

$$\Rightarrow \begin{pmatrix} 2 & \frac{-4}{3} \\ \frac{-4}{3} & \frac{25}{9} \end{pmatrix} \mathbf{x} = \begin{pmatrix} -3 \\ 17 \end{pmatrix} \quad (2.0.47)$$

Solving the augmented matrix of (2.0.47) we get,

$$\begin{pmatrix} 2 & \frac{-4}{3} & -3 \\ \frac{-4}{3} & \frac{25}{9} & 17 \end{pmatrix} \xrightarrow{R_1 \leftarrow \frac{R_1}{2}} \begin{pmatrix} 1 & \frac{-2}{3} & \frac{-3}{2} \\ \frac{-4}{3} & \frac{25}{9} & 17 \end{pmatrix} \quad (2.0.48)$$

$$\xrightarrow{R_2 \leftarrow R_2 + \frac{4}{3}R_1} \begin{pmatrix} 1 & \frac{-2}{3} & \frac{-3}{2} \\ 0 & \frac{17}{9} & 15 \end{pmatrix} \quad (2.0.49)$$

$$\xrightarrow{R_1 \leftarrow R_1 + \frac{6}{17}R_2} \begin{pmatrix} 1 & 0 & \frac{129}{34} \\ 0 & \frac{17}{9} & 15 \end{pmatrix} \quad (2.0.50)$$

$$\xrightarrow{R_2 \leftarrow \frac{9}{17}R_2} \begin{pmatrix} 1 & 0 & \frac{129}{34} \\ 0 & 1 & \frac{135}{17} \end{pmatrix} \quad (2.0.51)$$

Hence, solution of (2.0.45) is given by,

$$\mathbf{x} = \begin{pmatrix} \frac{129}{34} \\ \frac{135}{17} \end{pmatrix} \quad (2.0.52)$$

Comparing results of \mathbf{x} from (2.0.44) and (2.0.52) we conclude that the solution is verified.
