1 Problem

Let $\mathbb{F}$ be the field of complex numbers. Are the following two systems of linear equations equivalent? If so, express each equation in each system as a linear combination of the equations in the other system.

$$\begin{aligned} x_1 - x_2 &= 0 \\ 2x_1 + x_2 &= 0 \end{aligned}$$

and

$$\begin{aligned} 3x_1 + x_2 &= 0 \\ x_1 + x_2 &= 0 \end{aligned}$$

2 Solution

The given system of linear equations can be written as,

$$\mathbf{A}\mathbf{x} = 0 \tag{2.0.1}$$

$$\implies \begin{pmatrix} 1 & -1 \\ 2 & 1 \end{pmatrix}\mathbf{x} = 0 \tag{2.0.2}$$

$$\mathbf{B}\mathbf{x} = 0 \tag{2.0.3}$$

$$\implies \begin{pmatrix} 3 & 1 \\ 1 & 1 \end{pmatrix}\mathbf{x} = 0 \tag{2.0.4}$$

Now we can obtain $\mathbf{B}$ from matrix $\mathbf{A}$ by performing elementary row operations given as,

$$\mathbf{B} = \mathbf{C}\mathbf{A} \tag{2.0.5}$$

$$\begin{pmatrix} 3 & 1 \\ 1 & 1 \end{pmatrix} = \mathbf{C}\begin{pmatrix} 1 & -1 \\ 2 & 1 \end{pmatrix} \tag{2.0.6}$$

where $\mathbf{C}$ is product of elementary matrices given as,

$$\begin{aligned} \mathbf{C} &= (\mathbf{E_7}\mathbf{E_6}\mathbf{E_5}\mathbf{E_4}\mathbf{E_3}\mathbf{E_2}\mathbf{E_1}) \\ &= \begin{pmatrix} 1 & 0 \\ \frac{1}{3} & 1 \end{pmatrix}\begin{pmatrix} 1 & 0 \\ 0 & \frac{2}{3} \end{pmatrix}\begin{pmatrix} 1 & 1 \\ 0 & 1 \end{pmatrix}\begin{pmatrix} 3 & 0 \\ 0 & 1 \end{pmatrix}\begin{pmatrix} 1 & 1 \\ 0 & 1 \end{pmatrix}\begin{pmatrix} 1 & 0 \\ 0 & \frac{1}{3} \end{pmatrix}\begin{pmatrix} 1 & 0 \\ -2 & 1 \end{pmatrix} \\ &= \begin{pmatrix} \frac{1}{3} & \frac{4}{3} \\ \frac{-1}{3} & \frac{2}{3} \end{pmatrix} \end{aligned} \tag{2.0.7}$$

Now, performing elementary operations on the right side of $\mathbf{A}$ we obtain matrix $\mathbf{B}$ given as,

$$\mathbf{B} = \mathbf{A}\mathbf{C}^{'} \tag{2.0.8}$$

$$\begin{pmatrix} 3 & 1 \\ 1 & 1 \end{pmatrix} = \begin{pmatrix} 1 & -1 \\ 2 & 1 \end{pmatrix}\mathbf{C}^{'} \tag{2.0.9}$$

where, $\mathbf{C}^{'}$ is product of elementary matrices given by,

$$\begin{aligned} \mathbf{C}^{'} &= (\mathbf{E_1}\mathbf{E_2}\mathbf{E_3}\mathbf{E_4}\mathbf{E_5}) \\ &= \begin{pmatrix} 1 & 0 \\ -2 & 1 \end{pmatrix}\begin{pmatrix} \frac{1}{3} & 0 \\ 0 & 1 \end{pmatrix}\begin{pmatrix} 1 & 2 \\ 0 & 1 \end{pmatrix}\begin{pmatrix} 2 & 0 \\ 0 & 1 \end{pmatrix}\begin{pmatrix} 1 & 0 \\ 1 & 1 \end{pmatrix} = \begin{pmatrix} \frac{4}{3} & \frac{2}{3} \\ \frac{-5}{3} & \frac{-1}{3} \end{pmatrix} \end{aligned} \tag{2.0.10}$$

Thus (2.0.4) can be obtained from (2.0.2) by multiplying it with matrix $\mathbf{C}$ or $\mathbf{C}^{'}$, where each one is product of elementary matrices and hence invertible. Thus the two given homogeneous systems are row equivalent. Now writing equations in matrix-vector form as,

$$3x_1 + x_2 = \begin{pmatrix} 3 & 1 \end{pmatrix}\mathbf{x} \tag{2.0.11}$$

$$\implies \begin{pmatrix} 3 & 1 \end{pmatrix}\mathbf{x} = \frac{1}{3}\begin{pmatrix} 1 & -1 \end{pmatrix}\mathbf{x} + \frac{4}{3}\begin{pmatrix} 2 & 1 \end{pmatrix}\mathbf{x} \tag{2.0.12}$$

$$x_1 + x_2 = \begin{pmatrix} 1 & 1 \end{pmatrix}\mathbf{x} \tag{2.0.13}$$

$$\implies \begin{pmatrix} 1 & 1 \end{pmatrix}\mathbf{x} = \frac{-1}{3}\begin{pmatrix} 1 & -1 \end{pmatrix}\mathbf{x} + \frac{2}{3}\begin{pmatrix} 2 & 1 \end{pmatrix}\mathbf{x} \tag{2.0.14}$$

Thus, each equation in second system can be expressed as linear combination of equations in first system. (2.0.12), (2.0.14) is same as multiplying $\mathbf{C}$ with $\mathbf{A}$ as it takes the linear combination of each rows of matrix $\mathbf{A}$. Similarly,

$$x_1 - x_2 = \begin{pmatrix} 1 & -1 \end{pmatrix} \mathbf{x} \tag{2.0.15}$$

$$\implies \begin{pmatrix} 1 & -1 \end{pmatrix} \mathbf{x} = (1) \begin{pmatrix} 3 & 1 \end{pmatrix} \mathbf{x} + (-2) \begin{pmatrix} 1 & 1 \end{pmatrix} \mathbf{x} \tag{2.0.16}$$

$$2x_1 + x_2 = \begin{pmatrix} 2 & 1 \end{pmatrix} \mathbf{x} \tag{2.0.17}$$

$$\implies \begin{pmatrix} 2 & 1 \end{pmatrix} \mathbf{x} = \frac{1}{2} \begin{pmatrix} 3 & 1 \end{pmatrix} \mathbf{x} + \frac{1}{2} \begin{pmatrix} 1 & 1 \end{pmatrix} \mathbf{x} \tag{2.0.18}$$
